

TECHNICAL DATA SHEET

IRIS SALMONELLA®

DETECTION METHOD FOR SALMONELLAES

1 INTENDED USE

IRIS Salmonella® is an alternative research method of *Salmonellae* in human food and feeds, and environmental sample (except primary production samples).

Studies performed on **IRIS Salmonella®** Agar show a high specificity for the detection of *Salmonellae* including atypical species and serovars, which is a source of confusion on other medium.

Indeed, the detection of *Salmonella Typhi* and *Paratyphi*, lactose-positive *Salmonellae* (*Salmonella Senftenberg* and subspecies *S. arizonae* and *S. diarizonae*), saccharose-positive strains are ensured.

The media allows the detection of non-motile serovars (*S. Pullorum* and *S. Gallinarum*) or monophasic strains. **IRIS Salmonella®** Agar allows also the detection of strains which show a light or absence of esterasic activity on other medium (*Salmonella bongori*, *Salmonella Dublin* and *Atento*, certain strains of *S. enterica*, *S. houtenae* and *S. diarizonae* subspecies).

IRIS Salmonella® method is officially certified by AFNOR Certification, under the reference number BKR 23/07-10/11, for all human and animal food products and production and production environment samples (excluding primary production environment samples). The certification validity runs until 07 July 2019.

IRIS Salmonella® is also validated for the detection of *Salmonellae* in samples from 50 g to 375 g for milk powder, including infant milk with and without probiotics and from 50 g to 125 g for flours and croquettes in animal feedstuffs.

IRIS Salmonella® Agar may be used in the standard methods for the detection of *Salmonellae* as second isolation medium.

2 PRINCIPLES

The method allows the detection of motile and non-motile *Salmonellae*.

Analysis may be declared negative after 37 hours of enrichment (**Salmonella Enrichment**) and differentiation (**IRIS Salmonella®** Agar) steps.

The 1/10 dilution step of the sample is performed in **Salmonella Enrichment** broth according to NF EN ISO 6579 recommendations.

The enrichment step is done with the addition of the **IRIS Salmonella® Selective Supplement** in the broth and sample mix. The obtained **Salmonella Enrichment** broth is incubated for 16 to 24 hours at 41.5 ± 1.0 °C for the general.

The differentiation step is performed by inoculation of 10 µL onto **IRIS Salmonella®** Agar and incubated for 21 hours at 37°C.

Salmonella colonies are magenta whereas other species are blue-violet or uncolored.

The selective agents permit the inhibition of Gram-positive and some Gram-negative bacteria.

An eventual confirmation step may be done by classical tests described in standard methods or by a Latex test directly from an isolated magenta colony from **IRIS Salmonella®** Agar

Salmonella give rise to magenta colonies.

The selective agents insure the inhibition of Gram positive and certain Gram negative bacteria.

The secondary flora presents blue, purple or uncolored colonies.

An eventual confirmation step can be performed by classical tests described in the normalized method or by a Latex test directly onto a magenta colony isolated from **IRIS *Salmonella*® Agar**.

3 TYPICAL COMPOSITION

The composition can be adjusted in order to obtain optimal performance.

Salmonella Enrichment

For 1 liter of media :

| | |
|--------------------------|---------|
| - Peptone | 10,00 g |
| - Sodium chloride | 5,00 g |
| - Phosphate buffer | 5,06 g |

pH of the ready-to-use media at 25 °C : 7,0 ± 0,2.

Note: The composition of **Salmonella Enrichment** conforms to that of Buffered Peptone Water.

IRIS *Salmonella*® Supplement (Qsp 225 mL)

For 1 tablet :

| | |
|--------------------------|---------|
| - Selective system | 0,1 g |
| - Coloring agent..... | 0,005 g |

IRIS *Salmonella*® Supplement (Qsp 90 mL)

For 1 tablet :

| | |
|--------------------------|---------|
| - Selective system | 0,04 g |
| - Coloring agent..... | 0,002 g |

IRIS *Salmonella*® Liquid Supplement

For 1 vial of 50 mL :

| | |
|--------------------------|-------|
| - Selective system | 2 g |
| - Coloring agent..... | 0,1 g |

IRIS *Salmonella*® Agar

For 1 liter of media :

| | |
|-----------------------------|--------|
| - Peptone | 10,0 g |
| - Yeast extract | 5,0 g |
| - Sodium chloride | 5,0 g |
| - Phosphate buffer..... | 7,0 g |
| - Selective agents..... | 10,2 g |
| - Chromogenic mixture..... | 1,0 g |
| - Bacteriological agar..... | 16,0 g |
| - Opacifying agents | 6,5 g |

pH of the ready-to-use media at 25°C : 7,0 ± 0,2.

4 PREPARATION

Preparation of dehydrated media *Salmonella* Enrichment :

- Dissolve 20,0 g of dehydrated media (BK194) in 1 liter of distilled or demineralized water.
- Mix well, until complete dissolution.
- Distribute into tubes of 9 mL or in vials of 225 mL.
- Sterilize in an autoclave at 121 °C for 15 minutes.
- Cool to room temperature.

✓ **Reconstitution:**

20,0 g/L

✓ **Sterilization:**

15 min at 121°C

Preparation of IRIS *Salmonella*® Agar dehydrated media :

- Dissolve 60.7 g of dehydrated media (BK212) in 1 liter of distilled or deionized water.
- Slowly bring to boiling, stirring with constant agitation until complete dissolution.
- Maintain at boil for exactly 2 minutes.
- Do not overheat.
- Do not autoclave.
- Dispense the appropriate amount into Petri dishes.

✓ Reconstitution :
60.7 g/L

✓ Maintain at boil 2 minutes.
Do not overheat
Do not autoclave

5 INSTRUCTIONS FOR USE

Always use good laboratory practices.
Refer to standard NF EN ISO 7218.

NF VALIDATION-certified protocol for samples up to 25g (human food, feedstuffs and environmental samples) :

- Introduce aseptically (x) g of the sample to be tested into 9 (x) mL of ready-to-use **Salmonella Enrichment**.
- Introduce the **IRIS *Salmonella*® Liquid Supplement** at the rate of 0.1 mL/g of sample (i.e. 2.5 mL for 25 g) for the liquid supplement (BS078).
- For 25 g of sample, introduce directly one tablet of **IRIS *Salmonella*® Supplement** (BS077) in 225 mL of broth.
- For 10 g of sample, introduce directly one tablet of **IRIS *Salmonella*® Supplement** (BS093) in 90 mL of broth.
- Mix well or use a stomacher if necessary.
- Incubate the broth at 41,5 ± 1,0 °C for **16 to 24 hours**.
- Re-streak 10 µL of the enrichment onto the surface of **IRIS *Salmonella*® Agar**.
- Incubate at 37 ± 1 °C for 24 hours ± 3 hours.

✓ Enrichment :
1 :10 dilution,
16-24 h at 41.5 °C

✓ Detection :
Re-streak 10 µL,
24 h at 37 °C

Note on cold storage of media :

The enrichment broth, after incubation, can be kept up to 3 days at 2-8°C before re-streaking onto **IRIS *Salmonella*® Agar**. In the same way, after incubation, the **IRIS *Salmonella*® Agar** plates may be kept up to 3 days à 2-8°C before reading and subsequent confirmations.

In the context of NF VALIDATION, samples greater than 25 g have not been tested.

NF VALIDATION-certified protocol for milk powder (including infant milk with and without probiotics) from 50 to 375 g

- Aseptically introduce (x) g of the sample to be tested into 9 (x) mL of **Salmonella Enrichment** preheated to 41,5°C.
- Introduce the **IRIS *Salmonella*® Liquid Supplement** (BS078) at the rate of 0.1 mL/g of sample (i.e . 37,5 mL for 375 g of sample) .
- Mix well or use a stomacher if needed.
- Incubate the broth at 41,5 ± 1,0 °C for **18 to 24 hours**.
- Re-streak 10 µL of the enrichment onto the surface of **IRIS *Salmonella*® Agar**.
- Incubate at 37 ± 1 °C for 24 hours ± 3 hours.

✓ Enrichment :
1 :10 dilution,
18-24 h at 41.5 °C

✓ Detection :
Re-streak 10 µL,
24 h at 37 °C

Note on cold storage of media :

The enrichment broth, after incubation, can be kept up to 3 days at 2-8°C before re-streaking onto **IRIS *Salmonella*® Agar**. In the same way, after incubation, the **IRIS *Salmonella*® Agar** plates may be kept up to 3 days à 2-8°C before reading and subsequent confirmations

In the context of NF VALIDATION, only samples between 50 g and 375 g have been tested for the milk powder (including infant milk with or without probiotics).

NF VALIDATION-certified protocol for flours and croquettes in animal feedstuffs, from 50 to 125 g

- Aseptically introduce (x) g of the sample to be tested into 9 (x) mL of **Salmonella Enrichment** preheated to 41,5°C.
- Introduce the **IRIS *Salmonella*® Liquid Supplement** (BS078) at the rate of 0.1 mL/g of sample (i.e. 12,5 mL for 125 g sample) .

- Mix well or use a stomacher if needed.
- Incubate the broth at $41,5 \pm 1,0$ °C for **18 to 24 hours**.
- Re-streak 10 µL of the enrichment onto the surface of **IRIS Salmonella® Agar**.
- Incubate at 37 ± 1 °C for 24 hours ± 3 hours.

Note on cold storage of media :

After incubation, the **IRIS Salmonella® Agar** plates may be kept up to 3 days à 2-8°C before reading and subsequent confirmations.

✓ **Enrichment :**
1 :10 dilution,
18-24 h at 41.5 °C

✓ **Detection :**
Re-streak 10 µL,
24 h at 37 °C

In the context of NF VALIDATION, only those samples between 50 g and 125 g have been tested for the flours and croquettes in animal feedstuffs.

6 RESULTS

Colony appearance on **IRIS Salmonella® Agar** is as follows :

| Microorganisms | Characteristic colonies |
|---|-------------------------|
| Salmonella spp. (including <i>Salmonella Typhi</i> , <i>Paratyphi</i> , lactose-positive, saccharose-positive, immobile, monophasic, <i>Dublin</i> , <i>bongori</i>) | Pink to Magenta |
| <i>Escherichia coli</i> | Uncolored |
| <i>Enterobacter</i> spp., <i>Klebsiella</i> spp. | Blue-green to violet |
| <i>Proteus</i> spp. | Uncolored to brownish |
| Gram positive | Inhibited |

See ANNEX 1 : PHOTO SUPPORT.

7 CONFIRMATION

In the context of NF VALIDATION, all positive results must be confirmed with one of the following protocols :

- Option 1 : Perform classical tests described in normalized methods CEN or ISO (including the purification step), starting from a magenta colony isolated on **IRIS Salmonella® Agar**.
- Option 2 : Perform the CONFIRM' *Salmonella* or de *Salmonella* Latex Test (Oxoïd) from an isolated magenta colony.

In the event of discordant results (presumptive positive by the alternative method, not confirmed by one of the above options, and in particular by the latex test(s)), the laboratory must insure by any means possible the validity of the results they transmit. It is possible, for example, to proceed with biochemical tests or DNA probes as described in the standard NF EN ISO 7218.

8 QUALITY CONTROL

Typical culture response after 24 hours of incubation at 37 °C on **IRIS Salmonella® Agar** :

| Microorganisms | Growth |
|-------------------------------|------------|
| <i>Salmonella Typhimurium</i> | WDCM 00031 |
| <i>Salmonella Enteritidis</i> | WDCM 00030 |
| <i>Enterobacter aerogenes</i> | WDCM 00175 |
| <i>Escherichia coli</i> | WDCM 00013 |
| <i>Staphylococcus aureus</i> | WDCM 00034 |
| <i>Pseudomonas aeruginosa</i> | WDCM 00025 |

9 STORAGE / SHELF LIFE

Salmonella Enrichment :

Dehydrated media : 2-30 °C.

Ready-to-use media in vials or flexible bags : 2-25 °C.

IRIS *Salmonella*[®] Supplement

Liquid supplement : 2-8 °C.

Tablets : 2-8 °C.

IRIS *Salmonella*[®] Agar :

Pre-poured media in Petri plates (Ø 90 mm) : 2-8 °C.

Dehydrated **IRIS *Salmonella*[®] Agar** : 2-8 °C.

Prepared medium in plates (benchmark value*) : 1 month at 2-8 °C, shielded from light.

(*) Benchmark value determined under standard preparation conditions, following manufacturer's instructions.

CONFIRM' *Salmonella* :

Kit : 2-8 °C.

The expiration dates are indicated on the labels.

10 PACKAGING

***Salmonella* Enrichment :**

| | |
|----------------------------|---------|
| 500 g bottle | BK194HA |
| 5 kg drum | BK194GC |
| 10 x 225 mL vials | BM13608 |
| 3 x 3 L flexible bag | BM13708 |
| 2 x 5 L flexible bag | BM14408 |

***Salmonella* Enrichment + Tween[®] 80 :**

| | |
|----------------------------|---------|
| 3 x 3 L flexible bag | BM16308 |
|----------------------------|---------|

IRIS *Salmonella*[®] Supplement :

| | |
|------------------------------|---------|
| 10 x 50 mL vials | BS07808 |
| 120 tablets Qsp 225 mL | BS07708 |
| 120 tablets Qsp 90 mL | BS09308 |

IRIS *Salmonella*[®] Agar :

| | |
|----------------------------|---------|
| 20 plates (Ø 90 mm) | BM16008 |
| 120 plates (Ø 90 mm) | BM16108 |
| 500 g bottle | BK212HA |

Latex Agglutination test :

| | |
|--|---------|
| CONFIRM' <i>Salmonella</i> | BT01108 |
| Oxoid <i>Salmonella</i> Latex Test | |
